Boost Systems' MD500 Human External Cargo dual hook system is designed to transport more people with enhanced safety, flexibility & capacity, saving time & potentially – lives.

The quick-release hook installs in just minutes & can remain installed during refueling & positioning flights – reducing maintenance requirements & optimizing helicopter operational availability.

FEATURES

Fully compliant with FAA AC133-1B & 27.865 requirements.

Pilot controlled removable hook with 900 lb/410kg HEC Working Load Limit.

Removable HEC Hook enables operational flexibility by reducing overall fleet purchase costs.

Hook Spacing avoids unintentional hook contact & risk of damage &/or inadvertent release during flight.

HEC Hook "Stopper Plug" for installation when not performing HEC operations.

Integrated aluminum bumper to prevent fuel tank penetration during a vertical impact.

Most economical system available for your fleet.

THE MD500 HUMAN EXTERNAL CARGO SYSTEM CONSISTS OF:

- Fixed provision kit & fully portable HEC hook
- Compact Hydraulic Primary Quick Release System (PQRS) with Dual Activation Device
- Electrical Backup Quick Release System Control Box with Dual Activation Device
- + Provisions Kits & Accessories
- + Optional Approved PCDS with a lifetime of 10-years

WHEN LIFE IS ON THE LINE.
